

## Abstract

The present invention is a mounting bracket for the construction of a deck. The mounting bracket has a separating flange, a joist-fastening portion, a support flange, and a plank-fastening flange. The separating flange and the plank-fastening flange are generally located in a first plane. The joist-fastening portion is generally located perpendicular to the first plane. The joist-fastening portion has a joist-fastening hole for securing the mounting bracket to a vertical joist. The support flange includes an access hole to provide access through the support flange to allow an installer to install a first fastener in the joist-fastening hole. The plank-fastening flange includes a plank-fastening hole for securing the mounting bracket to a horizontal plank.
